

Private house, Farnham, Surrey, 2017

This project consisted of a between joist installation within the joists of the existing floor and an overlaid system over the new beam & block floor extension

As the new beam & block was not suitably level, Jupiter were asked to level using the slate levelling compound.

Here it the two system types, overlaid and between joist are clearly visible.

Needing only 4 circuits a mini mixing valve was used.

600 mm x 600 mm x 10 mm porcelain tiles were adhered directly to the Jupiter Screed Replacement Tile bridging both the beam & block and the joisted area without a movement joint.

The new tiled floor aligned perfectly with the new French doors.
